# CSIT121 – Lab 3
## File name: YourName_Lab_3.java

In the Lab 3, you are required to design a GUI to introduce yourself to me. I hope the following layout, look and feel good ☺

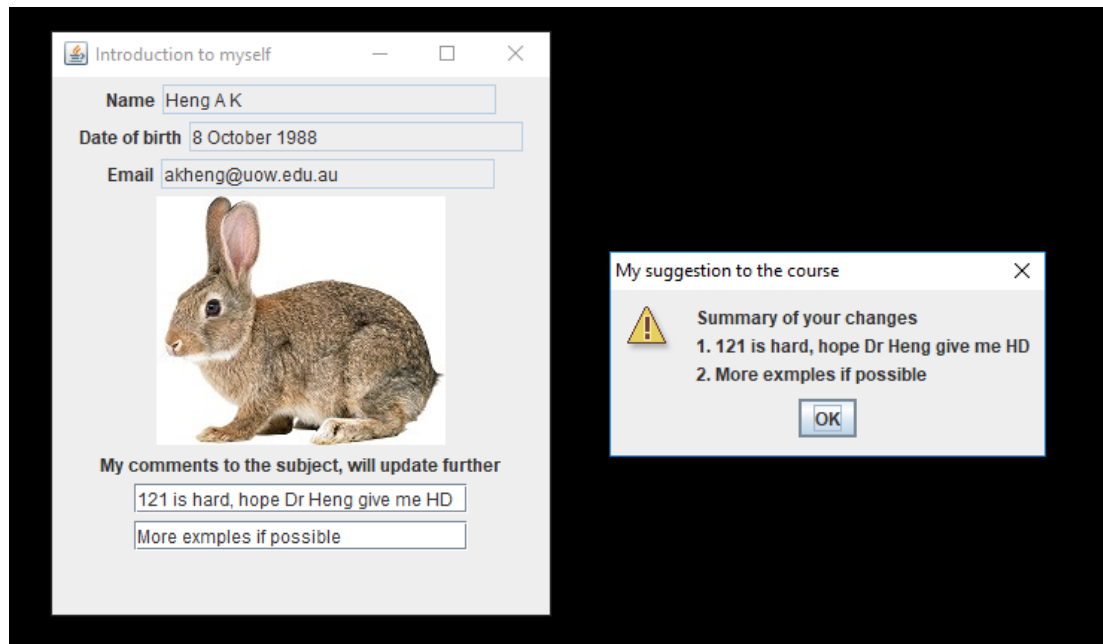

You see some labels (words in **bold**) and some text boxes. Some text boxes **are not editable,** for example, your name, your date of birth and your email address. The comments to the subject have *two editable text boxes* (*actually I created an array of JTextField, and initially, retrieve the two comments from an array of String, not compulsory but good to explore*).

Ideally you replace the above image by your photo ☺

When you execute your program, the above image on the left is displayed; when you move your mouse pointing to the picture, it displays "I am rabbit", my zodiac sign ☺
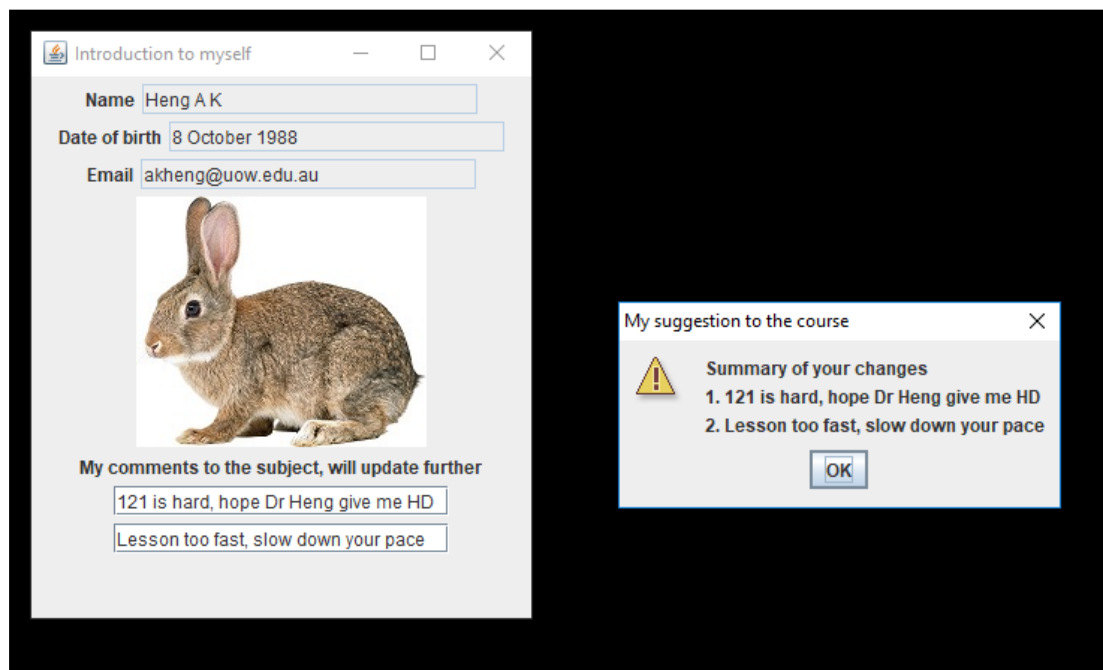

During the demonstration, I will get you to change the comments in case you write some bad words in the comment boxes that hurt me …. ha-ha … don't worry, feel free to scold

Now, let me change the 1$^{st}$ comment, the following two images are display next to each other; note that I used JOptionPane to display the summary:

If you click OK to the 2nd image, the 2nd image disappears.

If you update the 2nd comment, for example; you see the following new summary:

Enjoy exploring the GUI ☺
