CSIT121 – Lab 1
## Due date: see announcement in Moodle
File name: YourName_Lab_1.java

When you enrolled to this subject, I have no choice and need to assume that you knew some Java's; if you don't, I will assume that you were familiar in one of the programming languages; and if none of these two constraints, well … ☺

This is our 1st lab. Tell me what you know in Java.

Design a Java program to introduce yourself to me. This Java program can be simple for example, just having some printing statements inside the main method to achieve the target (I hope not!!!) or can be complicated by having a class to describe yourself and let the main method link to the methods of this class to do the job.

.

Some suggestions to UML diagrams (you can adjust …)

Upon executing your program, the following information of you (you can tell lie, no problem) will be displayed.

```
My Information
Name: Dr James Bond
National: Republic of Singapore
Date of birth: 8 October, 1951
I have 2 hobbies
   1: Bridge games
   2: Demonstrate more examples in class
I have 4 wishes
   1: To be a good teacher
   2: To be a World Champion in bridge
   3: Don't fail too many students :-)
   4: Give a lot of HDists
```

Choose whatever Java IDE or even at command line execution, you wish, but just submit ONLY one file to Moodle. The file name must be exactly **YourName_Lab_1.java** as quoted above (no space in the file name).
